St. Mark's Square

[St. Mark's Square]

St. Mark's Square is a square surrounded by beautiful Renaissance buildings such as the Duke's Palace, St. Mark's Church, St. Mark's Bell Tower, and the French Emperor Napoleon once praised it as "the drawing room of Europe".

[Bridge of Sighs]

The enclosed bridge is made of white limestone, has windows with stone bars, passes over the Rio di Palazzo, and connects the New Prison (Prigioni Nuove) to the interrogation rooms in the Doge's Palace. It was built in 1600. The view from the Bridge of Sighs was the last view of Venice that convicts saw before their imprisonment. The bridge's English name was bestowed by Lord Byron in the 19th century as a translation from the Italian "Ponte dei sospiri", from the suggestion that prisoners would sigh at their final view of beautiful Venice through the window before being taken down to their cells.

It is the largest ancient amphitheatre ever built, and is still the largest standing amphitheatre in the world, despite its age. The Colosseum is built of travertine limestone, tuff (volcanic rock), and brick-faced concrete. It could hold an estimated 50,000 to 80,000 spectators at various points in its history, having an average audience of some 65,000; it was used for gladiatorial contests and public spectacles including animal hunts, executions, re-enactments of famous battles, dramas based on Roman mythology, and briefly mock sea battles. Although substantially ruined by earthquakes and stone robbers taking spolia, the Colosseum is still a renowned symbol of Imperial Rome and was listed as one of the New 7 Wonders of the World. The Colosseum is depicted on the Italian version of the 5 euro cent coin.

[Arch of Constantine]

The Arch of Constantine is a triumphal arch in Rome dedicated to the emperor Constantine the Great. The arch was commissioned by the Roman Senate to commemorate Constantine's victory over Maxentius at the Battle of the Milvian Bridge in AD 312. Situated between the Colosseum and the Palatine Hill, the arch spans the Via Triumphalis, the route taken by victorious military leaders when they entered the city in a triumphal procession. Dedicated in 315, it is the largest Roman triumphal arch.

The tower is one of three structures in the Pisa's Cathedral Square (Piazza del Duomo), which includes the cathedral and Pisa Baptistry. Between 1589 and 1592, Galileo Galilei, who lived in Pisa at the time, is said to have dropped two cannonballs of different masses from the tower to demonstrate that their speed of descent was independent of their mass, in keeping with the scientific law of free fall.

The Pisa Cathedral in the heart of the square was built in the 12th century. It is a masterpiece of medieval Romanesque architecture.
